

TOOL BOX LIFTING SLINGS

The tool box lifting sling is made specifically for your tool box, therefore it will not slip off when it is properly placed on the tool box. The sling is made out of 1" Yellow webbing. The top part of the sling has a ring sewn on it for easy hook up for lifting. Then, sewn on the sling underneath the ring is a protective piece of 2-ply leather, which protects the tool box from getting scratched by the ring. Each of the bottom corners of the sling has a leather protective sleeve, which is placed over another piece of protective leather that is sewn directly onto the sling, giving it double wear protection where it is need most. The top corners of the sling also have a piece of leather sewn on the webbing for wear protection, therefore decreasing the chance of the tool box wearing through the sling.

(Lifting slings can be made for almost any size tool box, so please call for more information.)
