

VAN STRAPS (W/ E-TRACK FITTINGS)

These **Van Straps** are constructed with an extra wear piece in the eye of both fittings to help make the straps last longer than normal straps. There is a Leather Protector sewn on to each ratchet assembly's fixed end under the ratchet to protect your load from scratches that could be made by the ratchet. Then, there is an 8" adjustable protective sleeve placed on the webbing on each side of the ratchet to help protect the webbing from the corners of your load.

(1,000 Lbs. Working Load Limit)

(Any length straps are available upon request.)

E-TRACK STARTER STRAP

Part number **SSGETS2X6** - E-track starter strap - about 8" in total length, e-track fitting one end and D-ring other end. If you already have existing ratchet straps with either S-hooks or wire hooks on the ends that are work load rated of 1,000 lbs. or more and you need to use them in an e-track situation, this strap will work as a quick fix to the problem. Just snap the e-track end in the track in the trailer and put your S-hook or wire hook around the D-ring and ratchet your load down snug.
