

FORKLIFT BLADE SLEEVES

Forklift blade sleeves work great when you need to move products that you do not want to scratch. We make our sleeves with heavy duty nylon webbing, Cordura reinforcement at the tips, and tightening straps with Velcro release. More protection can be added to the normal construction of the sleeves upon request.

When needing a price for your forklift blade sleeves, please provide the following information:

- A. Length from tip of blade to start of the elbow
- B. Blade width
- C. Length from elbow to the first support bar
- D. Thickness of the thickest part of the blade
